

Experiment No. 8

Implement Restoring algorithm using c-programming

Name: Yash Mayekar

Roll Number: 29

Date of Performance:

Date of Submission:

**Aim:** To implement a Restoring division algorithm using c-programming.

**Objective -**

1. To understand the working of the Restoring division algorithm.
2. To understand how to implement Restoring division algorithm using c-programming.

**Theory:**

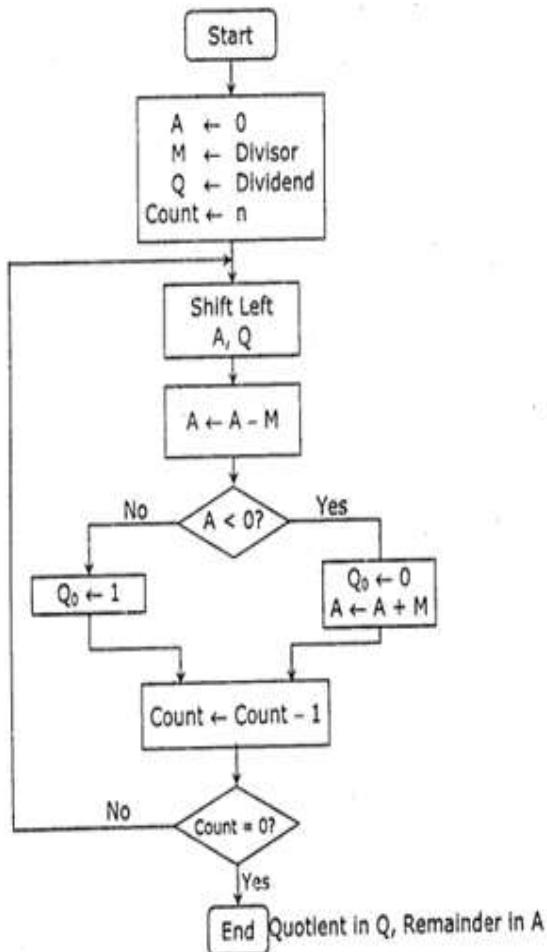

- 1) The divisor is placed in M register, the dividend placed in Q register.
- 2) At every step, the A and Q registers together are shifted to the left by 1-bit
- 3) M is subtracted from A to determine whether A divides the partial remainder. If it does, then Q0 is set to 1-bit. Otherwise, Q0 gets a 0 bit and M must be added back to A to restore the previous value.
- 4) The count is then decremented and the process continues for n steps. At the end, the quotient is in the Q register and the remainder is in the A register.

### Flowchart

Perform  $8 \div 3$  by restoring division technique.

	A Register	Q Register
Initially	0 0 0 0 0	1 0 0 0
Shift	0 0 0 0 1	0 0 0 □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	① 1 1 1 0	
Restore(A+M)	0 0 0 1 1	0 0 0 □
Shift	0 0 0 1 0	0 0 □ □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	① 1 1 1 1	
Restore(A+M)	0 0 0 1 1	0 0 □ □
Shift	0 0 0 1 0	0 □ □ □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	② 0 0 0 1	
Shift	0 0 0 1 0	0 0 □ □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	③ 1 1 1 1	
Restore(A+M)	0 0 0 1 1	0 0 □ □
Shift	0 0 0 1 0	0 0 □ □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	④ 0 0 0 1	
Shift	0 0 0 1 0	0 0 □ □
Subtract M	1 1 1 0 1	
Set Q <sub>0</sub>	⑤ 1 1 1 1	
Restore(A+M)	0 0 0 1 1	0 0 □ □
		Quotient
		Remainder

### Program-

```

#include <stdio.h>
#include <stdlib.h>

int dec_bin(int, int []);
int twos(int [], int []);
int left(int [], int []);
int add(int [], int []);
  
```

### Conclusion -

In conclusion, this experiment successfully implemented the Restoring Division algorithm using C programming. The Restoring Division algorithm is a method for dividing two numbers and determining the quotient and remainder. The C program emulated the algorithm's steps, including left-shifting the dividend and quotient registers, subtracting the divisor from the accumulator, and updating the quotient bit based on whether the accumulator was positive or negative. The program accurately produced the quotient and remainder of the division, providing a practical demonstration of the Restoring Division algorithm's operation. This experiment deepened our understanding of this division technique and its practical implementation, showcasing its importance in computer arithmetic and digital computation.
